DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 11,15,19,25 and 29, drawn to a catalyst comprising a tetragonal system composite oxide and a noble metal component.

Group II, claim(s) 12,16,20,26 and 30, drawn to a catalyst comprising a layer of an exhaust gas cleaning catalyst.

Group III, claim(s) 13-14,17-18,21-22,23-24,27-28 and 31-32, drawn to a catalyst comprising a substrate, a tetragonal composite and layer(s) of porous inorganic refractory oxide.

Group IV, claim(s) 33-34, drawn to a method for producing a tetragonal system composite oxide(or including noble metals) .

The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the special technical feature which is referred to Annex B of Appendix A1 of the MPEP (Administrative Instructions under the PCT, "Unity of Invention"). The express "special technical features" is defined as meaning those technical features that define a contribution which each of the inventions, considered as a whole, makes over the prior art."(Rule 13.2).

Unity exists only when there is a technical relationship among the claimed inventions involving one or more of the same or corresponding claimed special technical features. In this case, the technical feature shared by each invention is "tetragonal system composite oxide represented by A_2BO_4 "

The question of unity of invention has been reconsidered retroactively by the examiner in view of the search performed; a review of US 4,388,294 (Poeppelmeier et al), makes clear that the inventions of the groups I-IV lack the same or corresponding special technical feature because the cited reference(s) appear to demonstrate that the claimed technical feature does not define a contribution which each of the inventions, considered as a whole, makes over the prior art. Accordingly, the prior art of the record supports restriction of the claimed subject matter in to the groups as mentioned immediately above.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
